

ABDULHALEEM AYOMIDE

FULL-STACK ENGINEER

✉ abdulhaleemayomide@gmail.com <https://github.com/Haleem-code> [◆ haleem_sol](#)

Profile

I am a full-stack engineer with 4+ years of experience building interactive websites, Web3 applications, and AI-powered products. I work across the entire stack – from pixel-perfect frontends to smart contracts on EVM and Solana, and scalable backend APIs. I enjoy shipping real products in the NFT, DeFi, and decentralized space and helping developers grow through DevRel activities.

Professional Experience

Atom Group

Current

Frontend Engineer

Remote

- Building user interfaces for AI platforms, working closely with backend engineers.
- Delivering responsive, production-ready web products that bring AI capabilities to end users.
- Bridging design and backend to create seamless, interactive user experiences.

Playa

12/2025 – Current

Founder / Full Stack Engineer

Remote

- Building a live streaming platform for 1v1 game streams with real-time on-chain predictions.
- Developed the full product from scratch – frontend, backend, and blockchain integration.
- Built a custom Web3 wallet and on-chain prediction system for seamless in-stream betting.

Novus Academy

01/2025 – 06/2025

Fullstack Engineer

Remote

- Built and maintained the Novus web app on EduChain using React and Next.js.
- Implemented OpenCampus OCID authentication and server-side features with Next.js SSR.
- Wrote Web3 client code for on-chain payments and NFT certificate minting.

Superteam NG

11/2024 – 12/2025

Developer Relations

Nigeria

- Supported developers in building and launching projects on the Solana blockchain.
- Built an educational platform with in-app streaming and CLI tools for Solana developers.
- Reviewed pitch decks during hackathons, delivering structured technical feedback.

WalkFitness

01/2024 – 08/2025

Full Stack Engineer

Nigeria

- Led end-to-end development of a decentralized fitness app similar to StepN on Eclipse SVM.
- Integrated Fitbit for health data tracking and built on-chain tournament logic with transparent rewards.
- Designed full system architecture across frontend, backend (Next.js SSR, MongoDB), and blockchain layers.

DeHedgies NFT

09/2023 - 12/2023

Full Stack Web3 Developer

USA

- Built a full NFT launchpad handling minting, wallet integration, and on-chain interactions.
- Developed a task/quest system similar to Zealy and Galxe to drive community engagement.
- Provided active Discord support and technical guidance throughout the mint phase.

kuickthemes.com

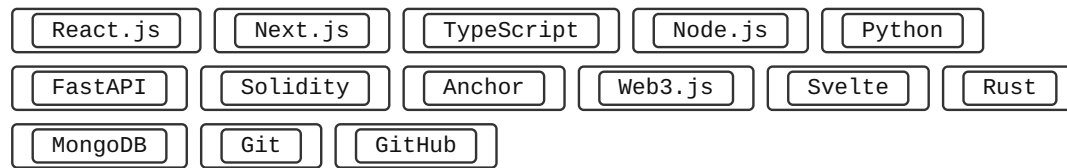

03/2022 - 05/2023

Frontend Developer

Germany

- Built and maintained responsive Shopify e-commerce applications and themes for clients.
- Worked with backend developers to improve site speed and SEO across projects.
- Created better UI/UX components using React and Next.js.

➔ Interests

building

- Building on-chain applications that connect users to blockchain in a simple way.
- Creating beautiful, responsive web apps that work smoothly across all devices.
- Exploring Web3 integrations and AI-powered tools to make products more engaging.

▣ Projects

retr0reptiles.xyz

3,333-piece NFT on Ethereum – ERC-721A, Merkle allowlist, phased minting, IPFS reveal system.

crism.xyz

Real-time portfolio tracker on Citrea (Bitcoin L2) with DeFi positions and cross-chain monitoring.

playa.app

Live streaming app for 1v1 game streams with real-time on-chain predictions and scoring.

walkfit.fly.dev

Decentralized fitness app with Fitbit integration, on-chain tournaments on Eclipse SVM.

sollearn.xyz

Solana learning platform with live streaming, interactive exercises, and a CLI tool.

ghostmint (Telegram Bot)

Telegram bot for minting NFTs from any collection – wallet integration and real-time updates.

blocksub.vercel.app

Subscription SDK for platforms to integrate a payment gateway using Solana tokens and stables.
